

CLASSROOM MODULES 1-7

Video, teacher's
book and pupil
notes

Esso

This resource pack consists of:

- video in 7 sections
- teacher booklet
- separate module packs of pupil notes (7 in total).

This links well into both the EIU cross-curricular theme and with environmental education.

It covers the areas of: oil and gas formation; exploration and drilling; production and transport; refining and processing; delivering the products; conserving the environment; research and development; oil and its applications.

A huge resource which may not be used in full but certainly a good set of materials to dip in and out of.

Pupil booklets have information relevant to each section of the video and this then leads to questions relevant to that section. Answers to questions and teacher notes accompany each section.

Key word:
Oil
Age range:
14-16
Ability:
Average to upper
Lesson Time:
Variable

TOPIC BOX

The emphasis is obviously oil-exploration, transport, refining, applications etc.

However, the resource covers other issues eg. communication methods. It also allows illustration of many aspects of an industrial process.
