This book is an excellent resource for both KS4 GCSE courses and post-16 courses. It contains 45 thematic maps which examine science-related topics. The maps are grouped into sections containing:

- Energy
- Air Pollution
- Water
- Weather
- Agriculture and Food
- Health
- Materials from the Earth

Each map has an accompanying student sheet which poses questions relating to the map data and extends students into making predictions, designing experiments or calculation exercises. Teacher notes and answers are provided.

Each atlas section contains information about the UK, EU (EC-1992 publication) and the world-but unfortunately not in the same order or about the same topic!

Each double-page spread needs to be used with care as some questions refer to other maps and require high level prior knowledge.

The maps alone are a valuable resource for independent student-centred activities post-16, (particularly useful for GNVQ Advanced information-handling and grading).

Lastly, certain double page spreads are ideal for covering absent colleagues' lessons!

TOPIC BOX

Energy, Air Pollution, Water, Weather, Agriculture and Food, Health, Materials from the Earth.
