

# Top Science

---

## Play Top Science and learn more about living things!

### How to play

- Play in pairs. Shuffle the game cards. Deal them face down into two piles.
- Pick a category from your first card. Higher score wins, so pick a feature with a good score.
- Ask your partner what score they have for the category you have chosen.
- If they don't have a number for that feature you have to choose another.
- The higher score wins the other player's card.
- Your partner goes next.
- Take it in turns until one player has won all the cards, or until time is up. Then the most cards wins.

### Remember...

- You can't change the order of your cards.
- Don't pick function! It doesn't have a score.

### What can I learn?

The difference between cells, tissues, organs and organ systems.

Why different cells have different shapes.

### What else can I do?

- Choose one card to research in more detail.
- Make a card of your own. Choose a cell or body part not already in the pack. Send your card to the ASE Science Year team (ask your teacher!). We will select the most creative and well-researched idea, and make it into one of the game cards. Remember to tell us your school address so we can post your card back.
